Summary

Entry-level SOC analyst with CEH, CND and ISC2 CC certifications and a year of IT support on servers, firewalls and patching. Built a Wazuh SIEM lab, ran real attacks from Kali, triaged the alerts and wrote a custom correlation rule mapped to ATT&CK T1110.001.

Technical Skills

SOC and Detection: SOC monitoring, SIEM (Wazuh), alert triage, log analysis, Windows Event Logs, detection rules, ATT&CK mapping
Networking and Infrastructure: TCP/IP, DNS, DHCP, VLAN, firewalls, server and patch management, Wireshark
Attacker Techniques: Kali Linux, Nmap, Metasploit, NetExec, Burp Suite, OWASP Top 10
GRC and Frameworks: MITRE ATT&CK, ISO/IEC 27001:2022, risk assessment, risk register, internal audit
Languages and Tools: Python (security automation), PowerShell, Docker, VMware Fusion, Git, GitHub, Excel

Experience and Training

Sunshine Industries | IT Support Specialist (Security & Infrastructure), Tamil Nadu Jun 2025 – May 2026

- Maintained the company's servers and firewall day to day so staff always had working systems and network access.
- Ran routine Windows and software patching, closing known security gaps before they could be exploited.
- Handled first-line faults like an L1: confirm, isolate the layer (device, cable, router, modem, settings), then fix or guide staff.
- Gained the sysadmin context I now bring to alert triage: what normal looks like on a server, firewall and office network.

Apponix Academy | Cybersecurity and Ethical Hacking Training, Bengaluru Apr 2025 – Jun 2025

- Three-month program with 20+ hands-on labs covering network security, vulnerability assessment and pen-testing basics.
- Practised reconnaissance and exploitation on Kali Linux with Nmap, Burp Suite and Metasploit.
- Covered security controls, network zoning, cryptography, application and endpoint security, and common attack types.

Futurense Technologies | Cyber Security Intern, Bengaluru Jun 2024 – Oct 2024

- Ran VAPT on 10+ intentionally vulnerable lab targets (bWAPP, Metasploitable) using Nmap, Burp Suite and Wireshark.
- Found 15+ medium and high-risk vulnerabilities: SQL injection, XSS, misconfigurations, weak credentials, outdated services.
- Used Wireshark to inspect live traffic and built network simulations in Cisco Packet Tracer.

Projects

SOC Home Lab: Attack Detection and Custom Correlation Rule (GitHub) Sep 2026 – Oct 2026
Wazuh 4.9.0, Docker, VMware Fusion, Windows 11, Kali Linux, MITRE ATT&CK

- Built an isolated SOC lab to practice detecting real attacks: a Wazuh SIEM in Docker, a Windows 11 target and a Kali Linux attacker on VMware Fusion.
- Ran SMB brute-force and obfuscated PowerShell attacks from Kali. Wazuh caught them as Event 4625 and 4688, which I mapped to MITRE ATT&CK techniques T1110.001, T1059.001 and T1027.
- Found that Wazuh's built-in rule 60204 covers every failed-login type, needs 8 attempts in 240s and has no MITRE ATT&CK tag. Wrote custom rule 100100 in local_rules.xml (built on rule 60122): level 12 after 5 failures in 60s from one IP, tagged T1110.001.
- Validated with live NetExec attacks (Hydra's SMBv1 module failed on Windows 11): the rule fired on the attack and stayed silent on a 3-attempt negative control.

ISO 27001 ISMS Implementation (Simulated GRC Project) (GitHub) Oct 2026
ISO/IEC 27001:2022, Risk Register, Statement of Applicability, Excel, Markdown

- Simulated the ISO/IEC 27001:2022 process for a fictional 50-person fintech, from asset list to internal audit.
- Scored 20 assets on confidentiality, integrity and availability; built an 18-risk register (5x5) with treatment plans.
- Wrote a 93-control Statement of Applicability, 7 policies and a gap assessment; ran a mock internal audit (4 findings).

Vulnerability Assessment Automation (GitHub) Jun 2025
Python, OWASP ZAP API, Requests, Pandas, CSV, Matplotlib

- Python tool on the OWASP ZAP API: spiders a target, runs an active scan, exports alerts to CSV and charts risk levels.
- Includes URL validation, error handling and live progress polling; saves risk, confidence and URL for every alert.
- Tested on OWASP Juice Shop: 134 alerts across 27 URLs (35 Medium, 63 Low, 36 Informational).

Certifications

- Certified Network Defender (CND), EC-Council
- ISC2 Certified in Cybersecurity (CC), ISC2
- Certified Ethical Hacker (CEH), EC-Council
- Cisco Networking Academy: Network Defense and SOC Operations
- IBM Penetration Testing and Threat Hunting
- OSForensics Triage, Passmark

Education

Jain University, Bengaluru | B.Tech in Computer Science and Engineering (Cybersecurity) 2025
Swami Darshanand Institute of Management and Technology, Roorkee | Diploma in Computer Science 2022
