# Brijesh Baral

**Cybersecurity Analyst | SOC Analyst (L1) | Junior VAPT Analyst**
+91 7017078095 | brjshbrl1411@gmail.com | Bengaluru, India (open to relocation)
LinkedIn | GitHub | Portfolio

## Summary

Entry-level cybersecurity analyst with CEH, CND and ISC2 CC certifications, a year of IT support on servers, firewalls and patching, and a 5-month VAPT internship. Found 15+ medium and high-risk vulnerabilities across 10+ lab targets; built a Wazuh SIEM lab with a custom detection rule mapped to MITRE ATT&CK.

## Technical Skills

**SOC and Detection:** SOC monitoring, SIEM (Wazuh), log analysis, Windows Event Logs, alert triage, detection rules
**Offensive Security:** VAPT, vulnerability scanning, OWASP Top 10, Nmap, Burp Suite, OWASP ZAP, Metasploit, Wireshark, Kali Linux, NetExec
**GRC and Frameworks:** ISO/IEC 27001:2022, MITRE ATT&CK, risk assessment, risk register, gap assessment, internal audit
**Networking:** TCP/IP, DNS, DHCP, VLAN, firewalls, network defense, Cisco Packet Tracer
**Languages and Tools:** Python (security automation), PowerShell, Docker, VMware Fusion, Git, GitHub, Excel

## Experience and Training

**Sunshine Industries | IT Support Specialist (Security & Infrastructure), Tamil Nadu** Jun 2025 – May 2026

- Maintained the company's servers and firewall day to day so staff always had working systems and network access.
- Ran routine Windows and software patching, closing known security gaps before they could be exploited.
- Troubleshot network faults layer by layer (device, cable, router, modem, settings), then fixed them or guided staff through the steps.
- Built the sysadmin grounding behind my security work: knowing what normal looks like makes abnormal easier to spot.

**Apponix Academy | Cybersecurity and Ethical Hacking Training, Bengaluru** Apr 2025 – Jun 2025

- Three-month program with 20+ hands-on labs: network security, vulnerability assessment, pen-testing basics, and recon and exploitation on Kali Linux with Nmap, Burp Suite and Metasploit.

**Futurense Technologies | Cyber Security Intern, Bengaluru** Jun 2024 – Oct 2024

- Ran VAPT on 10+ intentionally vulnerable lab targets (bWAPP, Metasploitable) using Nmap, Burp Suite and Wireshark.
- Found 15+ medium and high-risk vulnerabilities: SQL injection, XSS, misconfigurations, weak credentials, outdated services.

## Projects

**SOC Home Lab: Attack Detection and Custom Correlation Rule (GitHub)** Sep 2026 – Oct 2026
*Wazuh 4.9.0, Docker, VMware Fusion, Windows 11, Kali Linux, MITRE ATT&CK*

- Built an isolated SOC lab to practice detecting real attacks: a Wazuh SIEM in Docker, a Windows 11 target and a Kali Linux attacker on VMware Fusion.
- Ran SMB brute-force and obfuscated PowerShell attacks from Kali. Wazuh caught them as Event 4625 and 4688, which I mapped to MITRE ATT&CK techniques T1110.001, T1059.001 and T1027.
- Found that Wazuh's default brute-force rule needed 8 attempts in 240s and had no MITRE tag, so I wrote a custom rule (100100) in local_rules.xml: 5 attempts in 60s, grouped by source IP, tagged T1110.001.
- Proved it works: the rule fired at level 12 on live NetExec attacks and stayed silent on a 3-attempt negative control. Evidence is public on GitHub.

**ISO 27001 ISMS Implementation (Simulated GRC Project) (GitHub)** Oct 2026
*ISO/IEC 27001:2022, Risk Register, Statement of Applicability, Excel, Markdown*

- Simulated the ISO/IEC 27001:2022 process for a fictional 50-person fintech, from asset list to internal audit. Scored 20 assets on confidentiality, integrity and availability, then built an 18-risk register (5x5) with residual risk and treatment plans.
- Mapped risks to Annex A controls and wrote a 93-control Statement of Applicability, 7 security policies and a gap assessment, then ran a mock internal audit (4 findings) with a corrective action plan.

**Vulnerability Assessment Automation (GitHub)** Jun 2025
*Python, OWASP ZAP API, Requests, Pandas, CSV, Matplotlib*

- Built a Python tool that automates web vulnerability assessment: wraps the OWASP ZAP API to spider a target URL and run an active scan, then exports every alert to CSV and charts alerts by risk level with Matplotlib.
- Tested it on OWASP Juice Shop: 134 alerts across 27 URLs (35 Medium, 63 Low, 36 Informational), including 21 CORS misconfigurations and 10 missing CSP headers.

## Certifications

- Certified Ethical Hacker (CEH), EC-Council
- Certified Network Defender (CND), EC-Council
- ISC2 Certified in Cybersecurity (CC), ISC2
- IBM Penetration Testing and Threat Hunting
- Cisco Networking Academy: Network Defense and SOC Operations
- OSForensics Triage, Passmark

## Education

**Jain University, Bengaluru** | B.Tech in Computer Science and Engineering (Cybersecurity) 2025
**Swami Darshanand Institute of Management and Technology, Roorkee** | Diploma in Computer Science 2022
